Operation and Maintenance Manual for K.1050 Brushless Micromotor Kit

For Your Safety:

- Read this Manual before operating your Foredom Micromotor Power Tool.
- Always wear eye protection while operating this Micromotor.
Safety Instructions

A Micromotor Handpiece is a high speed rotary power tool which can be dangerous and cause serious injury if it is not used properly. NEVER operate it without wearing eye protection.

- **ALWAYS** wear proper eye and face protection.

- **ONLY** use accessories rated for 50,000 rpm or higher speeds when operating this micromotor. Follow the Allowable Rotation Speed chart on page 9 of this manual for safe operation when using accessories with head diameters of more than 3/32” (2mm).

- **ALWAYS** observe the manufacturer’s maximum speed rating when using any accessory.

- **NEVER** use or continue to use any accessory which appears to be damaged, loose, vibrating, bent, or out of balance. Inspect each accessory for cracks or flaws before use.

- **ALWAYS** insert the shank or arbor of an accessory or mandrel into the collet or chuck of the handpiece as far as possible in order to provide proper support and close the collet or chuck securely.

- **NEVER** use excessive side pressures which may tend to bend or break the shank or arbor of an accessory. Let the speed of the accessory do the work.

- **DO NOT** stall the motor by jamming or using excessive pressure on the mounted point, buff, wheel or accessory. This can result in damage to the motor.

- **WEAR** a dust protector, mask or respirator to prevent the inhalation of harmful dust or debris from grinding, carving or other operations performed with this power tool.

- **NEVER** operate with a damaged power cord. If the power cord or plug to the handpiece is damaged, repair or replace immediately.

- **USE** a dust collector (vacuum system) to pull sawdust, grinding dust, or other debris away from the work area and the micromotor intake vents.

- **NEVER turn on or start the Handpiece while chuck is in open (unlocked) position.** This can damage the handpiece. Make sure that a bur is installed and secured in the collet, that the spindle is NOT locked and that the bur can spin freely. Always operate and store it with a bur or other accessory in the chuck and with the chuck in the closed position.

- **DO NOT** operate the handpiece in the presence of any flammable liquid or gas.

Handpiece Holder,              Chuck wrench
Phillips Screw, Washer

AC Power Input (Fig. 4)
1. Check the label on the rear of the Control Unit to make sure that the electrical specifications match your AC power.
2. If the fuse needs to be replaced (Fig. 6), replace it with identical type and rating only—5x20mm,SLO-BLOW, 3.15A, 250V. For a 230V Micromotor use a 5x20mm,SLO-BLOW, 1.6A, 250V. The Fuse Holder 16 contains a spare fuse (Fig. 5).

⚠️ CAUTION
- Never plug or unplug the Power Cord with wet hands to avoid electric shock.
- Use only with a grounded AC power receptacle.

Installation
⚠️ CAUTION
- The Control Unit should rest on a flat, steady surface. Avoid blocking the ventilation openings in the bottom of the case.
- Use the Control Unit in locations that have a temperature below 100°F. Avoid excessively dusty, hot or humid locations.
Set-up and Electric Connection

1. Fix the Handpiece Holder 22 to the right side of the Control Unit with screw and washer. (Fig.7).
2. Plug the Handpiece Motor Cord 20 into the Handpiece Motor Connector 13 located in the rear of the Control Unit and then tighten the plug nut. (Fig.8).
3. Plug the Foot Pedal Cord 25 into the Foot Pedal Outlet 14 located in the rear of the Control Unit. (Fig.8)
4. Plug the Power Cord 26 into the Power Connector 15 in the rear of the Control Unit. (Fig.8).

⚠️ CAUTION
Make sure that all cords are connected safely and properly and that the Power Switch is off before plugging in the Power Cord.

It is convenient to store burs on the surface of the magnetic bur holder strips located on the side of the controller. Some burs do not contain enough ferrous metal to attach to the magnet. (Protect from ferrous metal dust.) (Fig. 9).

Operation

a. Make sure that a bur is inserted in the motor handpiece and collet is fully closed.

b. Set Power Switch 12 to off.

c. Plug the Power Cord 26 into a grounded electric outlet.

d. Set the Speed Control Knob 7 to the slowest position.

e. Turn on the Power Switch 12.

f. Select the rotation direction by pressing Forward/Reverse Selector Switch 8.

⚠️ CAUTION Never switch rotation direction while the handpiece is running.

Hand Mode Operation, follow steps a. through f. above, then:
1. Press the Hand/Foot Selector Switch 10 to “Hand”. (Hand/Foot Selector indicator light 11 lights up green.)
2. Press the Motor On/Off Switch 3 to run the motor. (Motor On/Off indicator light 4 lights up green.)
3. Set the Speed Control Knob 7 to desired speed.
4. Use the Motor On/Off Switch 3 to stop the motor.

Foot Mode Operation, follow steps a. through f. above, then:
1. Press the Hand/Foot Selector Switch 10 to “Foot”. (Hand/Foot Selector indicator light 11 lights up orange, Motor On/Off indicator light 4 lights up green.)
2. Set the Speed Control Knob 7 to desired maximum speed.
Foot Mode Operation continued

3. Press the Foot Pedal 24 to run the motor from start to a maximum speed (set by the speed control knob).

4. To increase speed, release foot pedal and allow motor to stop. Dial in new maximum speed and proceed.

In Foot Pedal Mode the micromotor will not exceed the preset speed.

Changing from Foot to Hand Mode

1. Press Hand/Foot selector switch, 10.

2. Press Motor On/Off switch, 3 and select a speed using the control knob 7.

Auto Cruise Mode

When the Foot Pedal is used, the Auto Cruise feature allows the speed to be maintained when the Foot Pedal is NOT pressed. Activate by pressing the Auto Cruise Switch 5 while keeping the Foot Pedal depressed, for 2 seconds at the desired speed. Deactivate by pressing the Foot Pedal.

20. Handpiece Motor Cord
21. Handpiece Cradle (No. HP4-933)
22. Handpiece Holder
23. Chuck Wrench
24. Foot Pedal (HP7-7060)
25. Foot Pedal Cord
26. Power Cord
CAUTION

- Do not exceed the maximum operating speed of the bur or accessory in the handpiece to avoid personal injury.
- Before turning off the Power Switch, make sure that the motor has been stopped.
- When the unit is not in use, for maximum safety, unplug the Power Cord.

Rotation Speed Display Set Mode
NOTE: Use this set mode only when you wish to operate the micromotor handpiece with a lower maximum RPM rating. This function is for setting a safe maximum rotation speed of the handpiece.

a. Turn on the Power Switch 12 while pressing the Motor On/Off Switch 3 and wait for a beep. Release the Motor On/Off Switch.

b. Set the maximum speed of the motor handpiece which you want to use by repeatedly pressing the Hand/Foot Selector Switch 10.

c. Return to the main mode by pressing the Motor On/Off Switch.

<table>
<thead>
<tr>
<th>Motor On/Off Switch</th>
<th>Hand/Foot Selector Switch</th>
</tr>
</thead>
<tbody>
<tr>
<td>“bc” displayed (Motor Handpiece)</td>
<td>25, 30, 35, 40, 45, 50 (x 1,000 rpm)</td>
</tr>
</tbody>
</table>

Maximum Torque Set Mode
This setting is used to match the maximum output of the control unit to the maximum torque capability of the handpiece, or to prevent damage to the bur. The maximum torque setting is preset at the factory to the recommended value. Use this procedure only if you are using another motor handpiece with a lower torque rating, or if you are using a bur which may be damaged by the full torque capability of the handpiece.

a. Turn on the Power Switch 12 while simultaneously pressing Forward/Reverse Selector Switch 8 when you hear a beep, release the Forward/Reverse Selector Switch.

b. Set the electric current (ampere) value for maximum torque of the motor handpiece by pressing Hand/Foot Selector Switch 10 repeatedly until the desired amperage value is displayed. The higher the current value, the more powerful the torque.

<table>
<thead>
<tr>
<th>Fwd/Rev Switch</th>
<th>Hand/Foot Selector Switch</th>
<th>Recommended</th>
</tr>
</thead>
<tbody>
<tr>
<td>“c1” displayed</td>
<td>1a, 2a, 3a, 4a, 5a, 6a, 7a</td>
<td>Up to 6a</td>
</tr>
</tbody>
</table>

CAUTION

- Do not select a current value which exceeds the rating of the motor handpiece. Too high a rating may shorten the motor life or damage the control unit. (Consult a qualified technician if possible.)

Note – To check the values of maximum rotation speed and maximum torque which are already set, turn on the Power Switch 12 while simultaneously pressing the Auto Cruise Switch 5. The Set values are shown on the Speed Display LED 2 consecutively.
Using the Motor Handpiece (MH-150)

Changing Accessories
Burs and other accessories can be inserted or removed from the handpiece collet when the collet is open. To open the collet:

1. Turn off the motor using the Motor On/Off Switch 3 and the Power Switch 12.
2. Twist the Chuck Handle in the “R” or release direction (clockwise) until the raised indicator bar clicks into the far left mark (.cd) on the silver center ring (Fig.11).
3. Remove the accessory and replace with another accessory. Insert the ‘new’ accessory shank fully (about 1 ¼”) into the collet for maximum support. You should feel it touch the back of the collet.
4. Twist the knurled Chuck Handle toward the “S” or secure position by turning counter-clockwise until it snaps to lock the collet. The accessory and the collet will be able to spin freely. The raised collet indicator bar will be above the far right (cd) mark in the silver center ring.

Note: The intermediate position between “S” and “R” holds both the spindle and the accessory in a locked position. This is useful to unscrew an over-tightened mandrel screw.

Never turn the power on when the collet is open or in the intermediate position. The spindle is in the locked position and will not turn. This will damage the motor.

How to Remove and Install the Collet
1. With knurled Chuck Handle in “R” release position and bur or accessory in collet, place triangular hole in Chuck Wrench 23 over triangular flats of Collet head and unscrew the collet counter-clockwise (Fig. 12) Remove collet.
2. With bur or accessory in new collet, thread into handpiece. Place triangular hole in Chuck Wrench 23 over triangular flats of Collet head and tighten the collet clockwise. Be careful not to over-tighten. Test to insure that new collet releases accessory smoothly in the “R” released position. Test to insure that new collet holds firmly in the “S” secure position and spindle rotates freely.

To order the correct Replacement or Additional Collet check the Handpiece Serial Number

<table>

<tr>
<td></td>
<td>HP7-5006</td>
<td>3.00mm</td>
</tr>
</tbody>
</table>
CAUTION

It is recommended that a bur be kept in the chuck at all times. Do not operate the handpiece without a bur in the chuck.

- Use only recommended burs.
- Always be sure chuck is free of dirt or debris before replacing a bur.
- After replacing a bur, make sure that the Collet Chuck is fully closed before running the Motor.
- DO NOT to open the collet while the motor is running. It will damage the handpiece.
- Always put the Handpiece on the Handpiece Cradle 21 or in Handpiece Holder 22 while not in use. (Fig.7). Take special care not to drop it on the floor.
- Thoroughly clean the Collet before reassembling. Clean at least once a week for longer life.
- Keep the Handpiece clean and free of dirt and debris during disassembly.
- The spindle and the motor should be disassembled only by a qualified repair facility.

CAUTION

- Never exceed the maximum rotation speed specified by the manufacturer or for the bur being used.
- Large burs, even when operated below maximum rated speed, may begin to vibrate. Speed should be reduced immediately to prevent damage to the bur, handpiece, or operator.
- Be sure to insert the Bur shank all the way, until it touches the back of the Collet Chuck. Then tighten the Collet Chuck. If the Bur is used while not inserted completely, it is very dangerous because vibration may cause it to come out, bend, or break.

Disassembling the Chuck Handle and the Motor

The Chuck Handle and the Motor are disassembled by continuously turning the Chuck Handle counterclockwise (Fig.13A).

Detaching the Motor and the Motor Cord

Unplug Handpiece Motor Cord Assembly 20 from Handpiece Plug Outlet 13 on the back of the control. The Motor Cord Assembly 20 can be replaced by unthreading the Rear Cover from the Motor Housing (Fig.13B).

### Rotation Speed – RPMs

![Rotation Speed Chart](chart.png)

## Allowable Rotation Speed

The chart is a general guide for the maximum rotation speed of conventional burs. The allowable rotation speed can be slightly different, depending on bur materials or types.
## Troubleshooting

**NOTE:** When an error reading is displayed, turn off the power switch for a few seconds and then turn it on again. If "5E" is displayed wait for about ten minutes. If the error reading re-appears, follow the Troubleshooting Chart below.

**Caution:** Repairs should be performed only by qualified personnel.
Repair Services

Authorized repair service is available at the Foredom factory in Bethel, CT. Send items for repair to the factory marked “Attention: Repair Department”. Enclose the item(s), a packing list, daytime phone number, return address, and information regarding the problem or repairs required. Estimates of repair cost will be made upon request. It is our policy not to proceed with a repair without your approval if the cost (labor plus parts) is more than fifty percent of the cost for a new replacement. You will be notified by mail and advised of the cost to repair and to purchase a new replacement. Please allow three business days for an estimate to be done and five to seven business days for repair work to be completed after we receive your approval to proceed.

Please retain your proof of purchase for warranty repairs.

Warranty

Foredom warrants its product to be free of defects in material or workmanship for a period of two years after purchase.

During the warranty period, the defective product will be repaired or replaced without charge or, at our option, the purchase price will be refunded. This warranty does not cover damage caused in transit or by accident, misuse, or ordinary wear.

ALL IMPLIED WARRANTIES, INCLUDING BUT NOT LIMITED TO WARRANTIES OF FITNESS AND MERCHANTABILITY, ARE HEREBY LIMITED IN DURATION TO A PERIOD ENDING ONE YEAR FROM DATE OF PURCHASE, AND WE WILL NOT BE LIABLE OR RESPONSIBLE FOR ANY SPECIAL OR CONSEQUENTIAL DAMAGES.

Repair or replacement will be made at our option if the product is returned postpaid to:

The Foredom Electric Company, 16 Stony Hill Road, Bethel, CT 06801

All warranty repairs must be done at the factory at the address above. We will not pay any shipping or transportation charges.

This warranty only covers the original purchaser of the product. Proof of purchase may be requested.

Some states do not allow limitations on how long an implied warranty lasts, so the above limitation may not apply to you. This warranty gives you specific legal rights, and you may also have other rights which vary from state to state.

For More Information

For more information on Foredom machines, handpieces or accessories, contact your local dealer. When no local dealer is available, write, call or fax:
