FOREDOM® AllSet®

Quick Change Handpiece Adapter Kit Instruction Handbook

AllSet® prong and channel-cutting tools, like the ones in this kit, bring stone-setters precise, repeatable accuracy and flexibility whenever they're used. The result is higher quality, defect-free stone settings done faster and easier than ever!

Safety Notes

1. Always use eye protection when cutting prongs and channels with your AllSet® Stone Setting and Milling Assembly Kits or when using any power tool.
2. Some prong and channel-cutting operations may require close placement of the hands to sharp, cutting edges. To avoid injury, please pay careful attention to hand placement, avoid distractions and do not operate prong-cutting equipment without your full attention.
3. For safety and effectiveness with any power tool, maintain a clean work surface and a clean general work area.

Here's what you'll find with your Quick Change Adapter kit:

- **The Easy-Cut Prong Guide.** Create level, uniform and precise cuts time after time with this remarkable prong-cutting aid. Its unique design ensures that prongs will be cut at a level and uniform height to set square, round or any other shape stone. It includes a new stop guide that precisely controls the depth of each cut.
- **Channel-Setting Guides.** Create perfectly contoured channel settings for round, square and baguette stones quickly and easily with these precision guides. Kit includes three separate guides (small, large and knife-edge).
- **The AllSet® Adapter.** The key to this flexible prong-cutting system is the AllSet® Adapter. With it, you can use the precision cutting tools above with the Nos. 10, 18, and 52 Quick Change handpieces. The adapter can also be used with the guides from the AllSet® Master Kit, Pavé Kit and Prong Guide Kit (sold separately).
- **Even More Flexibility.** The Easy-Cut Prong Guide and Channel-Setting Guides can also be used with the ForeDOM No. 30® chuck type handpiece. You will need an AllSet Basic Guide Assembly (L-bracket, body and collar) which many of the AllSet® kits on page 8 include. Simply attach the prong guide's plate to the L-bracket on the No. 30® handpiece (see illustration on page 6) and take advantage of the guide's precise cutting abilities.
- **AllSet® Quality.** AllSet® kits and components are made in the USA of highly durable materials. They are versatile tools that stand up to multiple demands and configurations.
